# MANUFACTURING

HIGH QUALITY. FAST DELIVERY.

**Consulting service**  
**Getting the best out of**  
**the production process.**

*We are a manufacturing company, but primarily we are a competent consultant. We use our expertise in engineering and metallurgy to find optimal specifications for plasticizing units, select suitable material combinations, and support you in your development of new barrels to improve profitability and functionality.*

In the manufacture of screws and barrels we attach importance to three criteria: Best quality, highest efficiency, and timely delivery.

## **Reliability**

*Short lead times. High on-time delivery rate.*

Our short lead times and high on-time delivery rate are, among other things. We also use quantity contracts, regularly communicate planning figures, and keep agreed numbers of articles in stock as a safety margin. This allows us to deliver in time even when demand is high.

## **Manufacturing capacity**

*Components of up to 4.5 meter length*

Star is able to manufacture finished parts ranging from very small diameters to parts with an overall length of more than 4.5 meters.

---

We're the leader in component technology in the plastics industry. To become a leader, we strive to get our customers what they want, when they want it, before they know they need it. That's why our list of services is as diversified as it is!

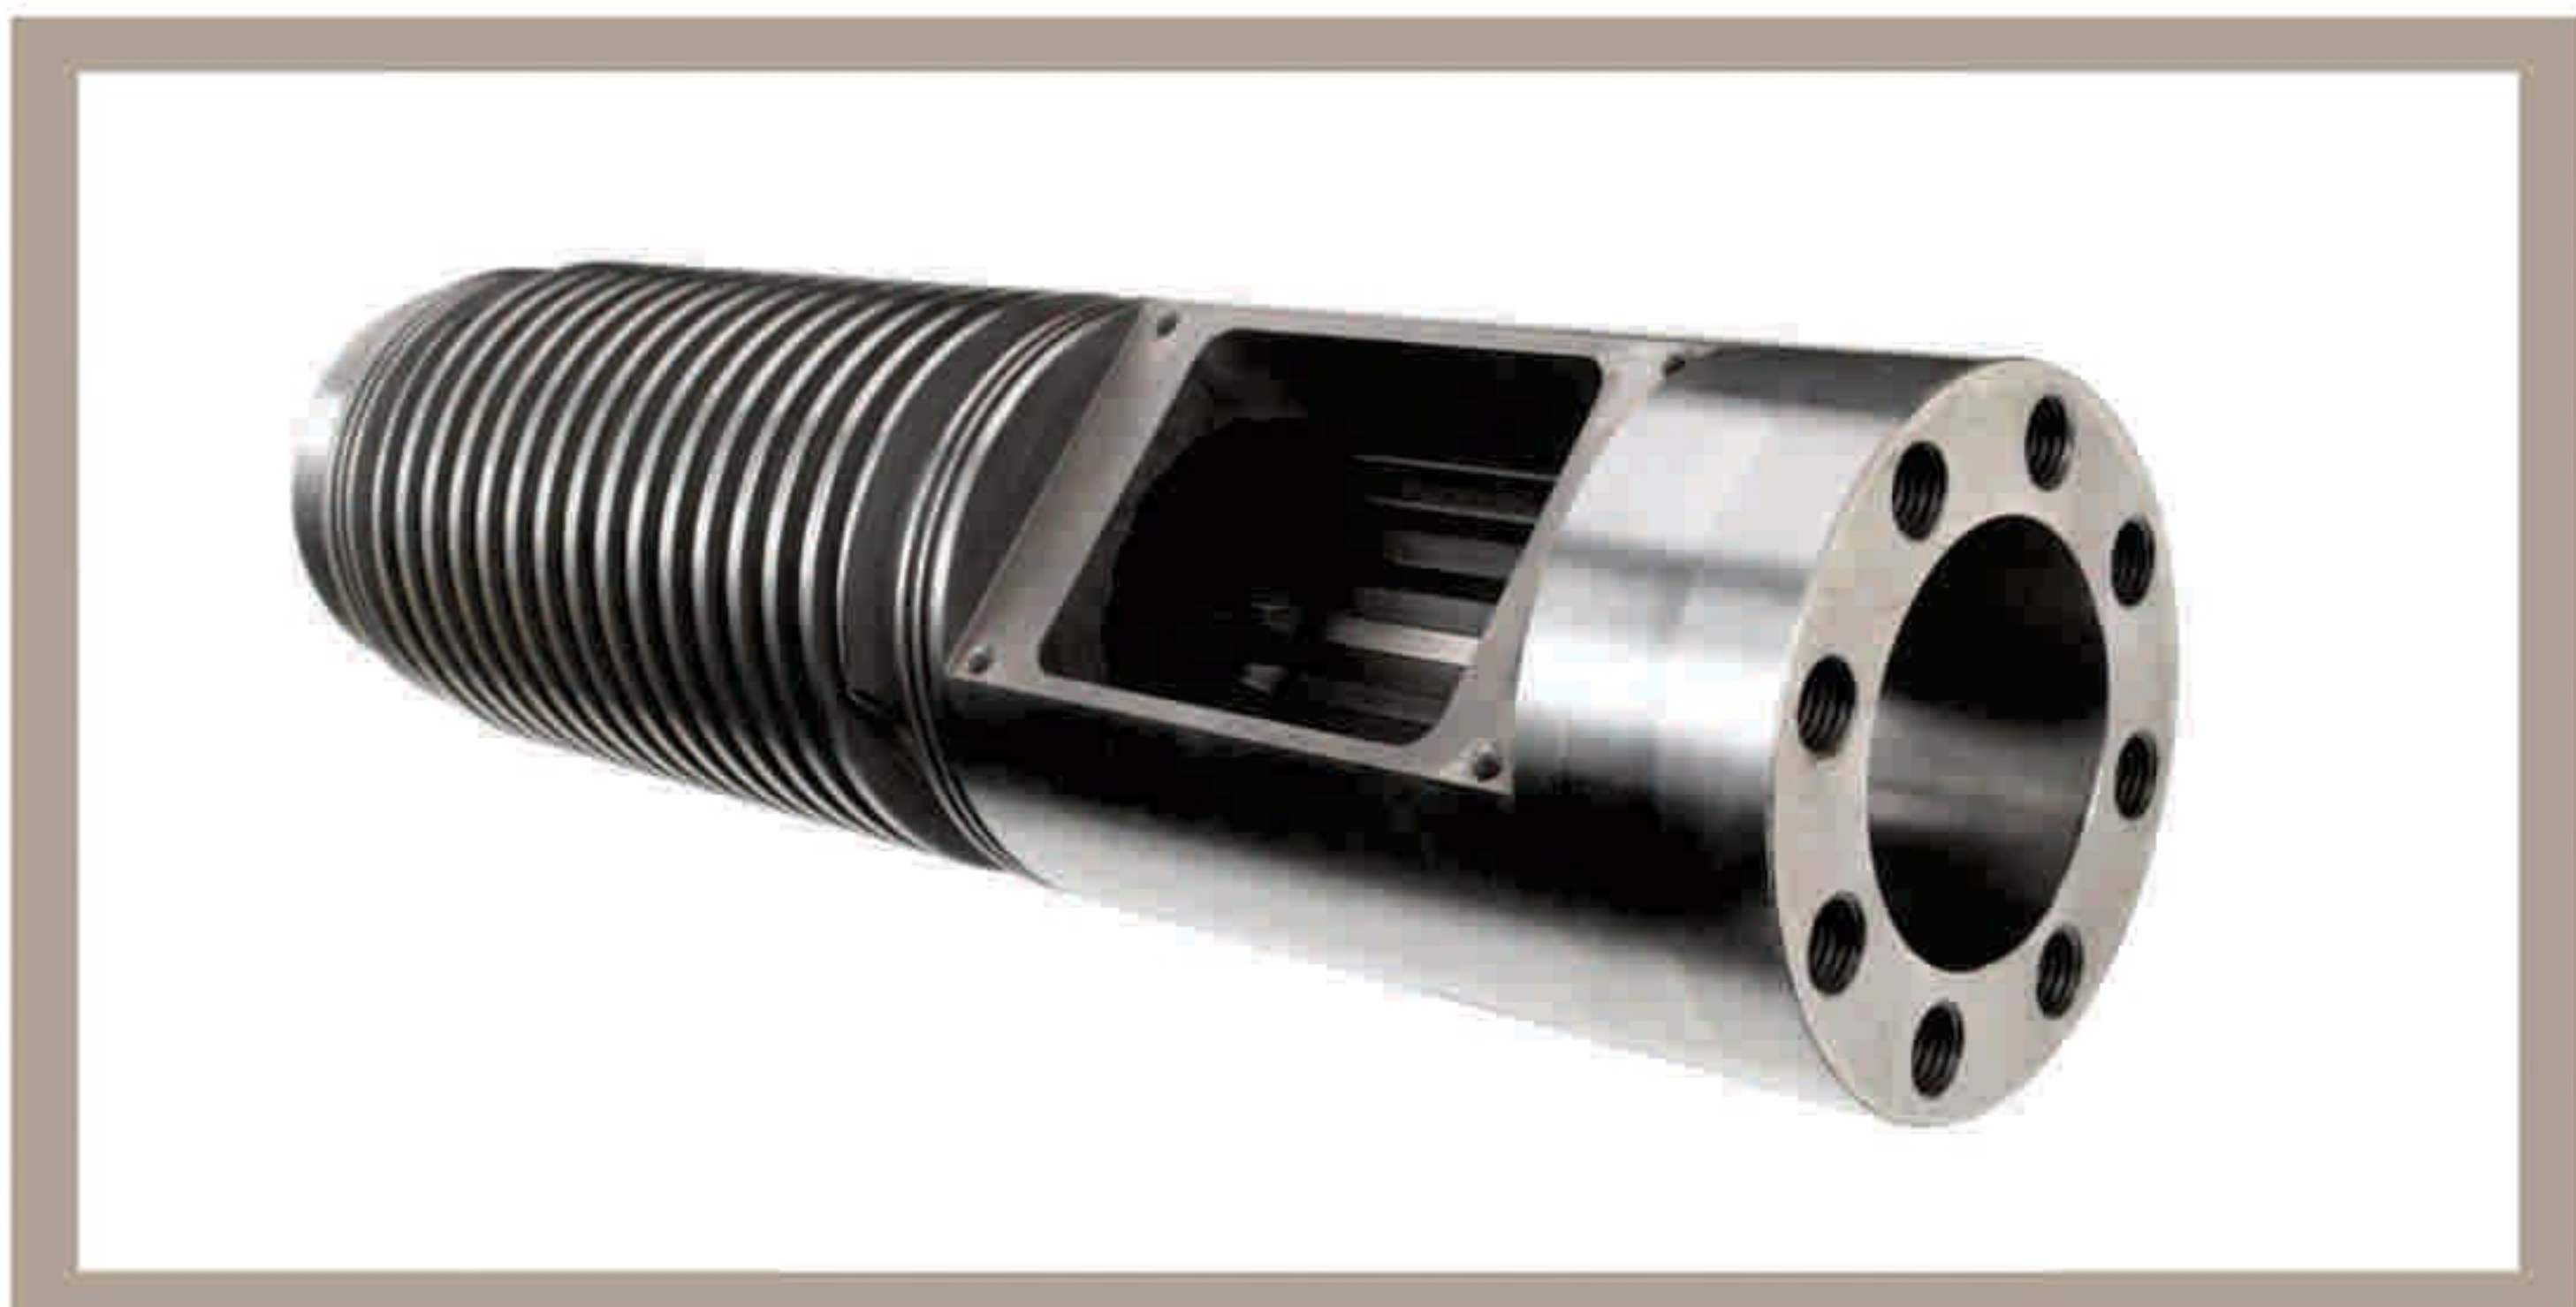

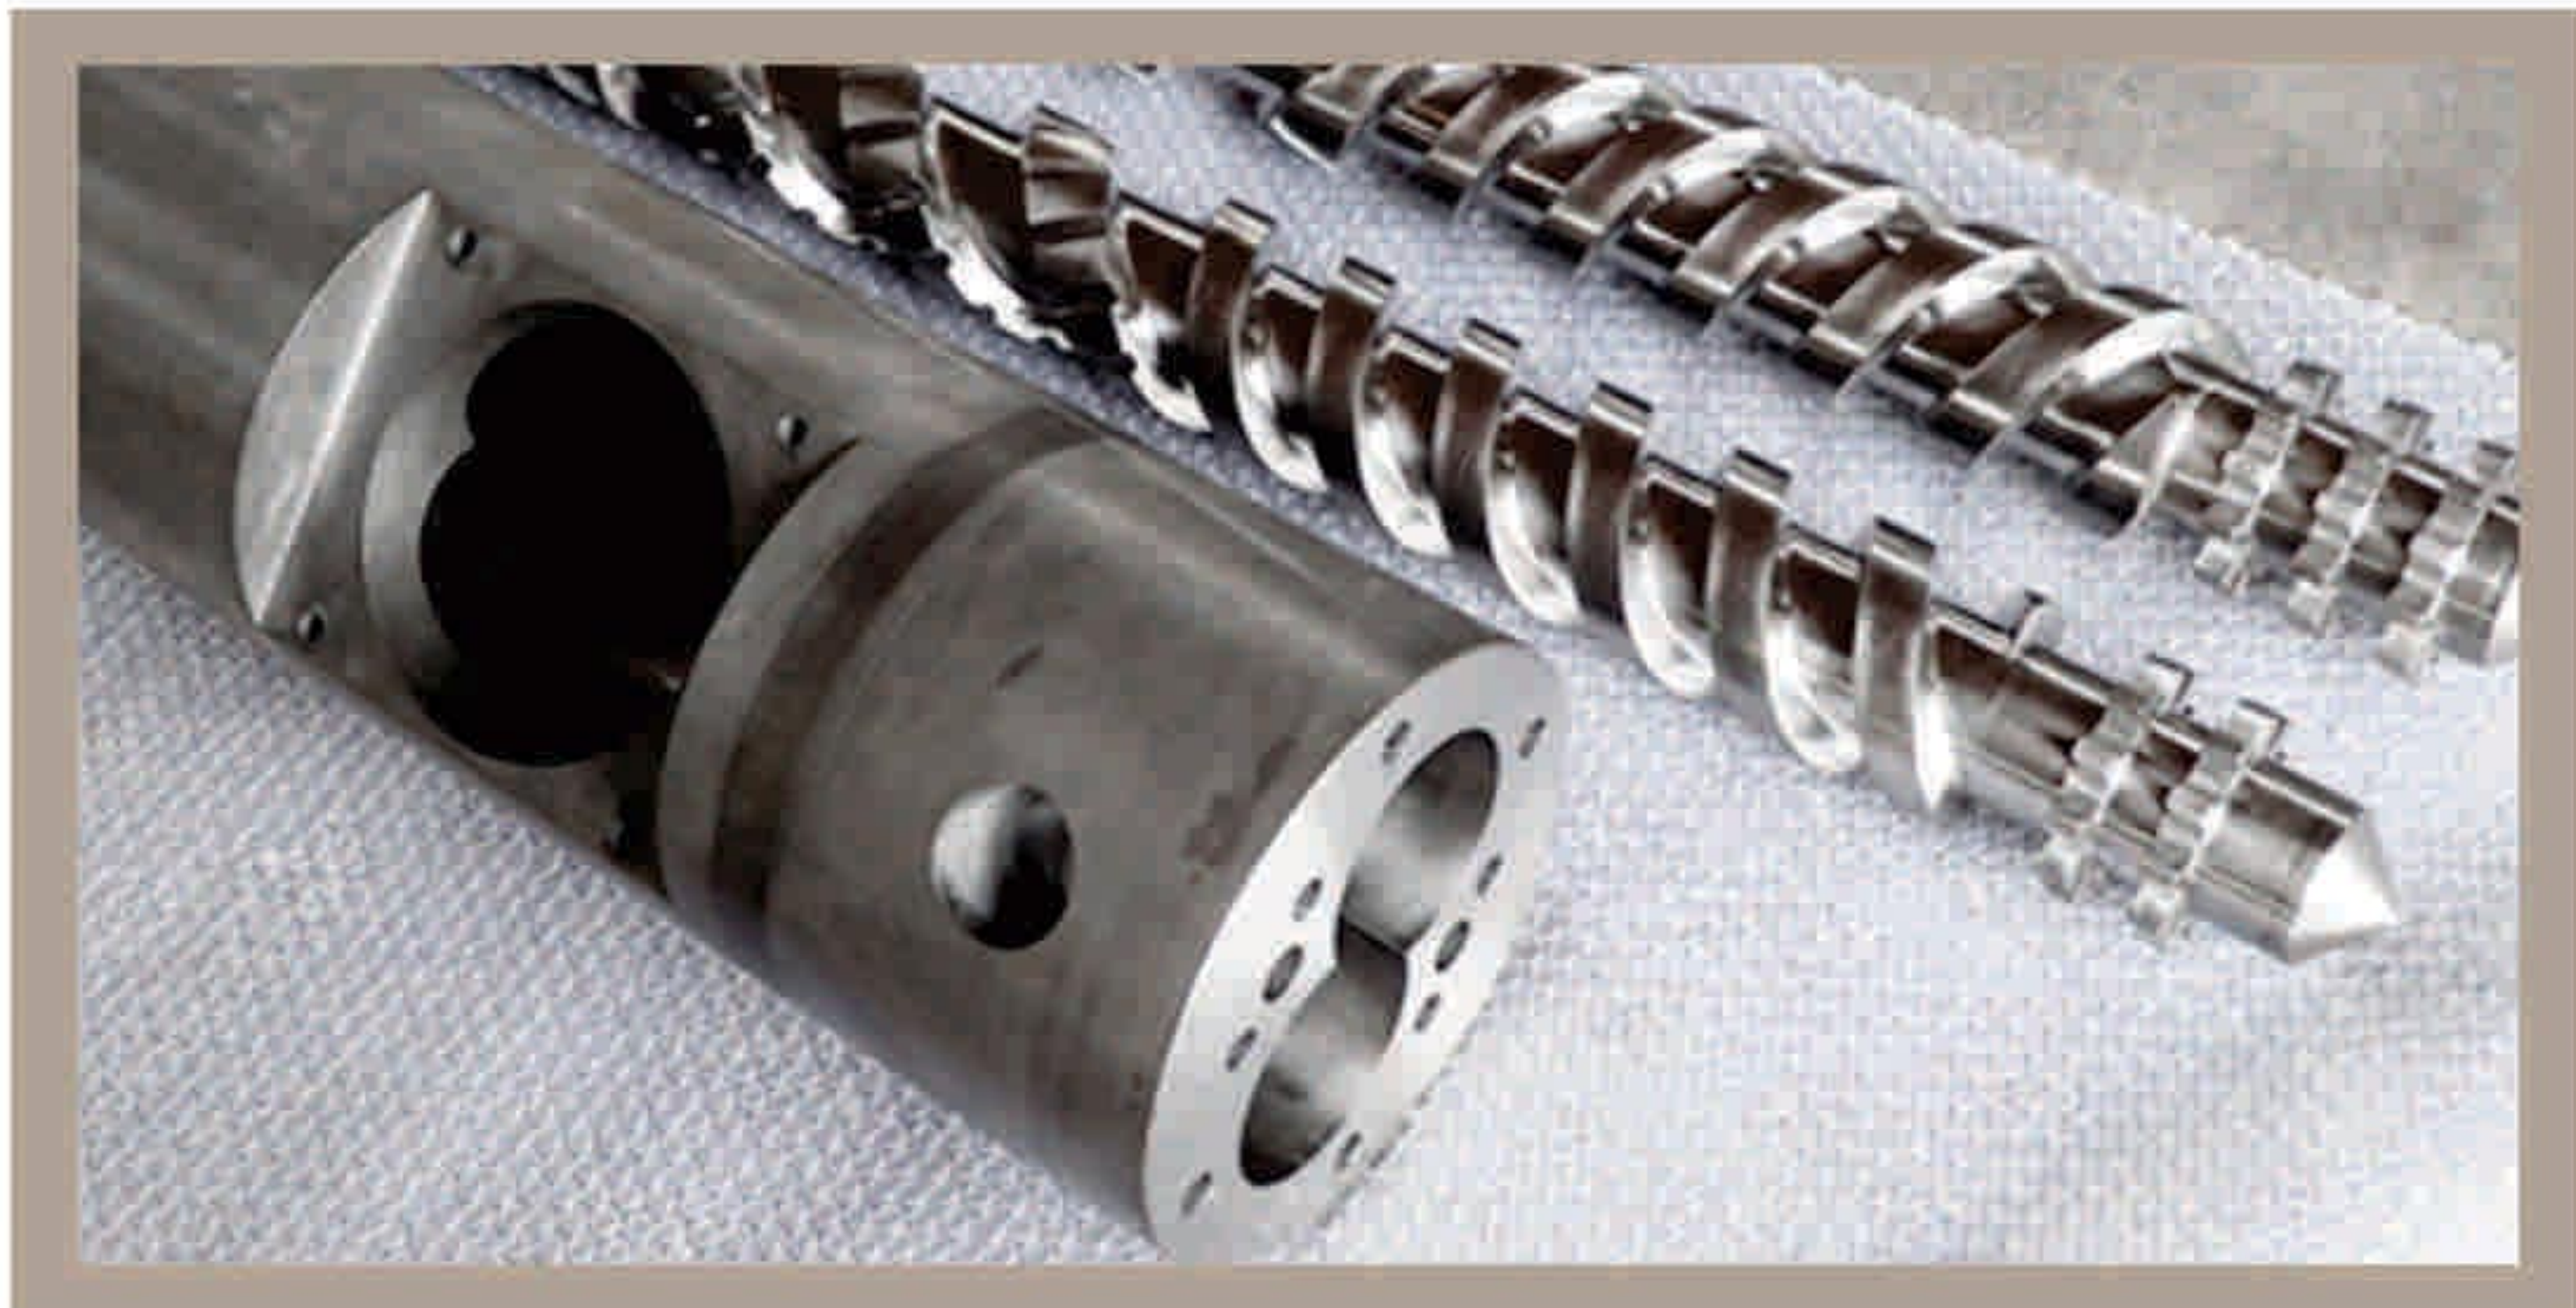

---

# ALWAYS OF THE HIGHEST QUALITY

*Highly wear-resistant screws will not just extend the service life of your plant. They will also improve the quality of your products. We can offer you all kinds of screws for extrusion and injection molding: 3-zone screws, multiple thread screws, barrier screws, vented screws, or highly complex twin screws.*
